

How to block other web browsers (Windows).

Installing and using the Notsus browser will not prevent other web browsers such as Edge, Firefox, Chrome, Brave or Opera from being used. To block those browsers please download Notsus Watchdog here.

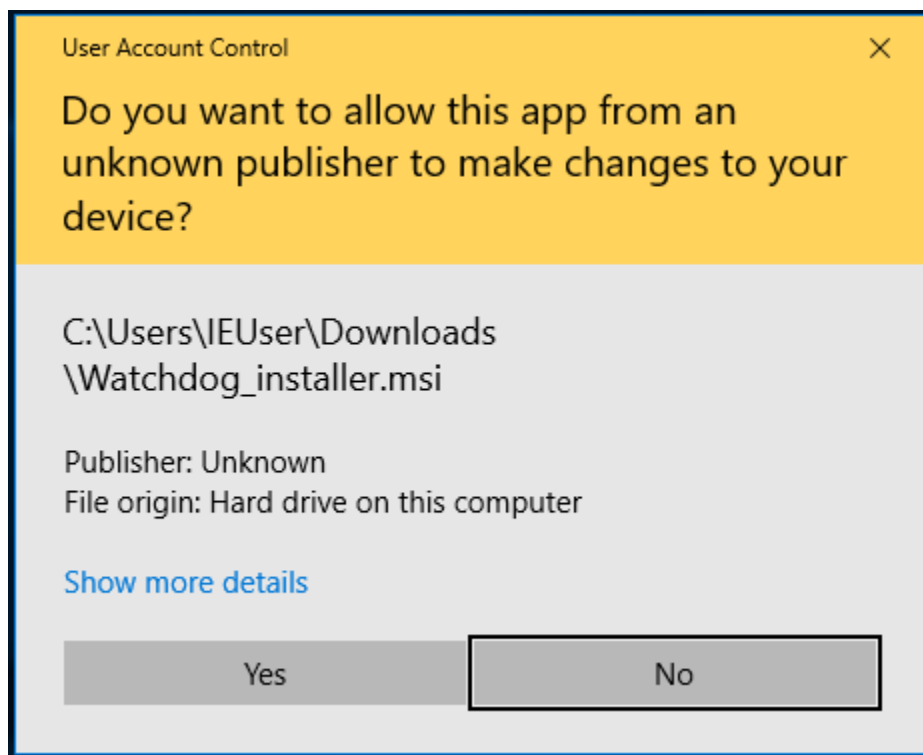

Once downloaded double click the “Watchdog_installer” file in the Downloads folder.

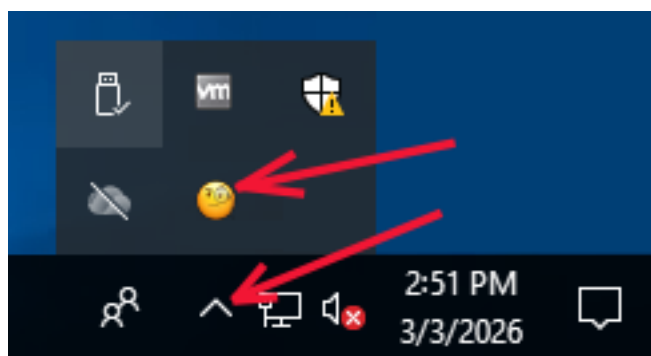

This will start the installer, click Next and follow the installer wizard.

It will ask you to allow the app to make changes, this is necessary to give the Watchdog permission to run.

When the installer has finished, you will be able to find the Watchdog icon in the notification area (system tray), in the bottom right of your screen – click the up arrow if necessary to see the icon.

Right clicking on the Watchdog icon allows you to enable the block by choosing “Browser block”. **The block can be disabled by selecting the menu item again and entering the default passcode ‘1234’.** Therefore you should choose “Change passcode” and enter your own passcode.
